NodeJS
Figma

PROJECTS

BATTLE API Visit ↗

Currently building a scalable API platform for competitive systems, designed to handle real-time interactions, user battles, and structured data exchange. Focused on performance, security, and easy integration for developers.

SEVA LINK Visit ↗

A platform that helps local vendors connect to online marketplaces without extra costs using Supabase as the backend database.

RECO ECOSYSTEM Visit ↗

A smart institutional system combining attendance and library management. Includes QR + AI-based attendance tracking with a secure admin dashboard. Provides a digital library system with QR asset tracking, real-time availability, and automated return management.
